The decreased in the inflation in Cebu City is driven by Alcoholic Beverages and Tobacco

The deceleration in the inflation was mainly driven by the decrease in the inflation of Alcoholic Beverages and Tobacco index from 3.3 percent in April 2022 to 1.0 percent inflation in May 2022. Also, contributing to the downward trend was brought about the decrease in the indices of the following commodity groups in May 2022:

- Food and Non-Alcoholic Beverages, -1.2 percent
- Clothing and Footwear, 0.0 percent
- Personal Care, and Miscellaneous Goods and Services, 0.3 percent

Meanwhile, indices of the rest of the commodity groups retained their previous month's inflation rates:

- Housing, Water, Electricity, Gas, and Other Fuels, 1.3 percent
- Furnishings, Household Equipment and Routine Maintenance of the House,
 5.0 percent

Indices among commodity groups: Information and Communication; Recreation, Sport and Culture; Education Services; Restaurants and Accommodation Services; and Financial Services posted a constant inflation at 0.0 percent. (See Table 2)

On the other hand, increase in the inflation was higher in Transport at 16.7 percent in May 2022, from 15.2 percent in April 2022. (See Table C.)

Technical Notes:

The Philippine Statistics Authority generates and announces the monthly Consumer Price Index (CPI) based on a nationwide survey of prices for a given basket of goods and services. Two important indicators, the inflation rate and purchasing power of the peso (PPP), are derived from the CPI which are important in monitoring price stability and the value of the country's currency.

The Consumer Price Index (**CPI**) is an indicator of the change in the average retail prices of a fixed basket of goods and services commonly purchased by households relative to a base year.

Base Period/Base Year is the period, usually a year, at which the index number is set to 100. It is the reference point of the index number series.

Inflation Rate (IR) is equivalent to a decline in the purchasing power of the peso. It is the change in the CPI over a specific period of time (usually a month or a year). That is,

$$Inflation Rate = \frac{CPI_2 - CPI_1}{CPI_1} * 100$$

Where:

CPI₁ - is the CPI in the previous period

CPI₂ - is the CPI in the current period

The **Purchasing Power of the Peso (PPP)** is a measure of the real value of the peso in a given period relative to a chosen reference period. It is computed by getting the reciprocal of the CPI and multiplying the result by 100. That is,

$$PPP = \frac{1}{CPI} * 100$$
