

Cebu's Palay and Corn Situationer

2019 Edition

Area Harvested

Actual area from which harvests are realized. This excludes crop areas which were totally damaged. It may be smaller than area planted. It refers to the effective area on Palay and Corn where harvesting is done. In crop statistics, this applies to temporary crops.

3,822 Ha

Area Harvested of Palay in 2019

60,445 Ha

Area Harvested of Corn in 2019

Production

Quantity produced and actually harvested during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved etc. Production from seed growers is excluded from the survey.

11,409 MT

Volume of Palay production of Cebu in 2019

46,837 MT

Volume of Corn production of Cebu in 2019

Yield

An indicator of productivity derived by dividing total production by the area harvested.

3.0 MT per Ha

Total Palay production per area harvested of Cebu in 2019

0.8 MT per Ha

Total Corn production per area harvested of Cebu in 2019

Note:

Results are from Palay and Corn Production Survey (PCPS) conducted quarterly by the Philippine Statistics Authority (PSA) that generate information on palay production, area and yield, and other production-related statistics.
